

PANDELIS KONDOS

Graduate of DIT

UI/UX Engineer

Web Developer

PROFILE

After graduating from university and completing my obligatory term in the Greek Navy I started a postgraduate graduate degree in economics in OPA university. Although I successfully completed some courses, I was not able to keep up with the very advanced rest of the course and I was not able to complete the degree. So, I aspire to land my first web development job.

EXPERIENCE

I think for an entry level job that I aspire to land my vanilla CSS skills are pretty advanced.

I would say that my JS skills are pretty advanced as well.

I would rank my React skills as moderate since my project experience is limited.

My familiarity with PHP is pretty minimal although I have started working on a quite big project (news site), but since I do not think that it is possible to land a backend developer job as a junior developer I have stopped working on this project for the time being, although I intend to finish it in the future.

My familiarity with SQL I would say is pretty high, although this is not a skill required for a frontend developer.

My familiarity with MongoDB is not as high as my SQL familiarity, but with a touch up I would say I am pretty competent.

I am quite familiar with Figma both as a designer and as a developer (to follow someone else's design).

I use Git/Github for my personal projects, but I do not have much experience on working with a team. Of course, these are personal estimates based on the time and the number of projects I have worked on.
